

Synchronizing the KeePass Database Between Computers (via FTP)

How to synchronize KeePass Databases across multiple computers using an FTP Service

If you haven't already installed KeePass, head over to the download page:

<http://keepass.info/download.html>

Synchronize Via URL

File > Synchronize > Synchronize with URL... (or press Ctrl+Shift +R)

Input Credentials for URL Prompt

Open From URL

Open From URL
Open a database stored on a server.

URL:
The complete URL must be specified, including protocol, server and full path to the file.
Example: ftp://ftp.someserver.com/pub/MyDatabase.kdbx

User name: Password:

The credentials you enter here are used to authenticate you against the server. Do not enter your KeePass database master password.

Remember:

Help OK Cancel

Fill out the relevant ftp credential information ensuring you select **Remember user name and password**
